

Portal solution in own online system

Most companies want to streamline and digitize their end user communication as much as possible.

The **e-Boks Portal** solution for the corporate online system provides an integrated platform for digitizing costly and time-consuming manual processes into your own digital universe.

The **e-Boks Portal** solution supports the following actions in i-frame:

- Digital signing of documents
- Sending notifications
- Secure dialog between sender and end user

The digital signing of documents solution is supported via API integration, too.

Planning is the key to a successful implementation of **e-Boks Portal**.

You and e-Boks, or a partner, spend time to select which document types you need to send to your customers or business partners to ensure a successful digitization of your business.

Once the document types are selected, and your system is set up, your end users or business partners can start to communicate securely and sign documents from their personal mailbox.

Sender benefits

The **e-Boks Portal** solution is an attractive option for digital delivery of all end user documents for you as a sender (content provider).

- **e-Boks Portal** offers substantial savings compared to the traditional, physical mail process
- e-Boks guarantees 100% delivery of documents from sender (content provider) to end user and vice versa
- Your communication channel is safe and has the look and feel of your website

End user benefits

- End users have 24/7 access to documents, regardless of how they access the document, be it from a computer, a mobile phone, or a tablet
- The end user will not have to switch between different digital platforms to access documents
- End user will receive a notification on any platform when there is new a document

Features

End users who log on to a web site with an integrated solution can view company specific documents and perform the following actions:

- View documents
- Sign documents
- Save copies to computer
- Mark documents as read or unread
- Rename documents

If the company has chosen to categorize the documents for dispatch, such as overviews, signing notifications, and annual statements, the end user can set a filter for the document types from the company to easily find a specific document.

Other add-on features are available upon request.

Process

Plan the solution

If you as a sender (content provider) is new to e-Boks, the recommendation is to carefully consider the delivery method for the corporate documents; possibly in collaboration with your e-Boks distributor.

Setup and configuration

The **e-Boks Portal** solution is a standard solution with the option to perform customizations.

Implementation and test. Based on a common understanding of the company's needs and capabilities of the portal solution, e-Boks will set up and configure a test environment. When the test environment is made available, sender must integrate the solution in own environment and start the testing process.

Production and support. The test phase is set up in collaboration with e-Boks. The test phase must encompass duration, scope, defect reporting, and defect response time.

The e-Boks integrated solutions accessed via the **e-BoksPortal** solution
